

Mini Golf

Turn your recyclables into a fun, physical, math game for your children! Everyone will enjoy constructing and playing their own mini golf course!

Getting Started:

-  Clean and dry your empty milk cartons, then cut them in half.
-  Place the cartons on the floor, laying on their sides, so the openings face the room. (These are used as the holes)
-  Place the squares of paper across the room from the holes. (These are used as the tees).
Insulation Tubes are used as obstacles and "bumpers."
-  Place the ball on the tee and count how many strokes it takes to make it into the hole. Be sure to keep track of each player's score.
-  Have your children help add their scores once they've completed the course. The more milk cartons you have, the bigger your course can be!

Materials Needed:

3-6 Empty 1/2 gallon Milk Cartons

Ping Pong Balls or Whiffle Golf Balls

Putter or Whiffle Ball Bat

Squares of Paper

Foam Insulation Tubes

Help your child write the numbers and add the scores

PLAYER	1	2	3	TOTAL
Grayson	3	3	2	
Ian	5	3	4	
Gabe	3	4	3	

This one covers both Building/Transportation AND Math. (If you allow the kids to help design and build the course). Depending on the amount of space you have for this activity, you can even build it one hole at a time, play it, then break it down and construct another. Or older kids could construct a course for the younger kids. TIP: Write each player's name or initials on their ball so there's no confusion
